On-Demand Teleradiology Platform

Solving Radiologist Shortage and High Latency in Medical Reports

Our platform instantly matches cases from hospitals worldwide with the optimal radiologist, reducing reporting time using an AI-enabled DICOM viewer

Global Reach

Connect with the best radiologists, no matter where you are

Instant Matching

Get the right radiologist for your case instantly

AI-Enhanced Efficiency

Reduce reporting time with our advanced AI-enabled PACS

Experience the future of radiology today!

Describe your service/ product that you will be offering to UK clients?

We shall be acting as a collaborator, acting as a bridge between the GMC registered Radiologists and the NHS trusts, private hospitals who have number of CT / MRI scans, X rays which need to be reported for quick and prompt patient care. Our aim is to reduce the backlog of the Radiology reports in the NHS which the Royal college of Radiologists asserts to be at a significantly high level, higher than ever before.

What is the price of the service or product that you will be offering in the UK?

The pricing will be variable as per the degree of expertise and specialist opinion required. The CT and MRI scans would cost between 35-55 GBP, the X Rays 5-10 GBP.

Is there any pricing advantage to hire your company?

The peculiarity of this business is speed, promptness but far more important is to maintain high accuracy levels. Nevertheless, we are open to negotiations, if the clients feel so.

WHAT IS THE USP?

Reducing the turn around time for the generation of reports to less than 24 hrs .

What kind of association will work for the product/ Services?

We would like to have an association that would benefit the patients in general and on the business front, the NHS Trusts, Hospitals and the teleradiology companies would benefit from quick, accurate Radiology reports generation.

Transforming Today for a better tomorrow

WHO WE ARE

Uevolve Healthcare UK Ltd is a venture aimed at providing holistic health solutions – from accurate diagnosis to help optimum delivery of care.
